Skills

R (expert) • STATA (expert) • L^AT_EX (expert) • Python (intermediate) • Matlab (basic) • Dynare (basic)

Languages

German native, **English** fluent, **French** fluent, **Portuguese** basic

Working papers

International Financial Integration and Output Co-Movement. This paper investigates how bilateral cross-border financial integration across 31 countries has affected output co-movement over the 2001-16 period. To gauge for effects of financial integration on co-movement I propose a new instrumental variable strategy exploiting the fact that cross-border financial integration is organized in densely connected communities that are sparsely connected among each other. Applying the new instrument to the data shows that greater financial integration leads to less co-movement in normal times and contagion in crisis times. Contagion among the total sample stems from greater stock market integration, while contagion among advanced economies is additionally driven by the bond market integration channel. These results cast doubt on the business cycle smoothing role of equity market integration.

Regulatory Actions over the Cycle. with [Gonçalo Pina](#) (*in progress*)
